

Key Features

- Generates 1.485GHz or 1.485/1.001GHz signal for Gennum ICs
- Low power — 20mW less than GO1525
- 50Ω output impedance
- Operates from a single 2.5V supply
- 8 pin tape on reel
- Pb-free and RoHS Compliant

Applications

Other Products:

- GS4915 ClockCleaner™

Deserializers:

- GS1559, GS1560A, GS1561, GS9060

Serializers:

- GS1531, GS1532, GS9062

Description

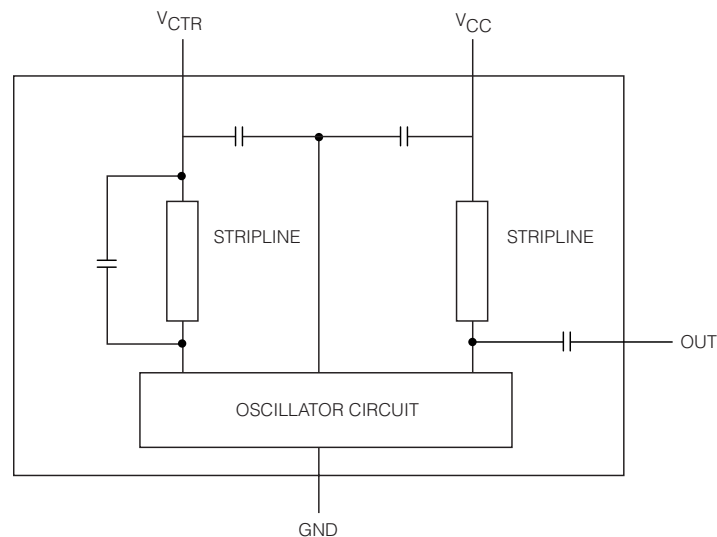

The GO1555 is a self contained, miniature Voltage Controlled Oscillator (VCO). It produces a clean 1.485GHz reference clock signal with low spurious noise content. It is designed to drive 50Ω strip lines.

The VCO requires a single 2.5V supply and draws a maximum of 8mA of current. It is packaged in a miniature 8-pin proprietary surface mount package and operates over the temperature range of -40°C to +85°C.

The GO1555 can be used in place of the older GO1525 VCO. Compared to the GO1525, the GO1555 saves space, consumes less power and achieves better jitter performance.

Note: Optimal performance of the GO1555 is achieved using slightly different loop bandwidth component values than those used with the GO1525.

This component and all homogeneous subcomponents are RoHS compliant.

1. Pin Out

1.1 Pin Assignment

NOTE: Pin numbers are arbitrary
There are no pin markings on the device itself

1.2 Pin Descriptions

Table 1-1: Pin Descriptions

Pin Number	Name	Type	Description
2, 4, 6, 8	GND	Power	Most negative power supply connections.
5	V_{CTR}	Input	Control voltage for the VCO.
7	V_{CC}	Power	Most positive power supply connection.
1	O/P	Output	VCO signal output.
3	NC	–	No connection.

2. Electrical Characteristics

3. Soldering Recommendations

The device is manufactured with Matte-Sn terminations and is compatible with both standard eutectic and Pb-free solder reflow profiles. The recommended standard eutectic reflow profile is shown in Figure 3-1. The maximum recommended Pb-free reflow profile is shown in Figure 3-2.

Figure 3-1: Standard Eutectic Solder Reflow Profile

Figure 3-2: Maximum Pb-free Solder Reflow Profile (Preferred)

3.1 Reflow Conditions

The device will meet the data sheet specifications after completing the reflow process according to the profile shown in [Figure 3-1](#) or [Figure 3-2](#). Recommended soldering conditions are as follows:

Preheating	150±10°C, 60 to 120 sec.
Soldering	Peak 260°C
	Over 220°C within 80 sec.

3.2 Soldering Flux

Do not use cleaning type flux. Washing the devices after using cleaning type flux may damage inner parts and affect performance.

3.3 Rework or Repair

Rework or repair must only be done once. Do not reflow the device more than twice; once for initial soldering and once for remounting after rework.

Do not vibrate the VCO during reflow soldering.

3.4 Endurance To Warp

When the device is soldered on a printed circuit board (dimension: 100mm x 100mm; thickness: 1.6mm) and the PCB is warped as shown in [Figure 3-3](#), the device will not be cracked or damaged.

Figure 3-3: PCB Warp

4. Handling Recommendations

4.1 Cleaning

There are two options for cleaning the devices.

Option 1:

1. Clean but do not use solvent cleaners.
2. Thoroughly dry assemblies afterwards.

Option 2:

1. Mount device after board is cleaned.

4.2 Storage

Store the devices out of direct sunlight, at a stable temperature and humidity. Avoid extreme temperatures, high humidity and wide temperature fluctuations. Condensation on the devices may result in reduced quality and lowered solderability.

Avoid dust, sea breezes and corrosive gases (Cl_2 , NH_3 , SO_2 , NO_x , etc.).

Use within 6 months after delivery. If the devices are stored for more than one year, solderability may be degraded.

4.3 Transport

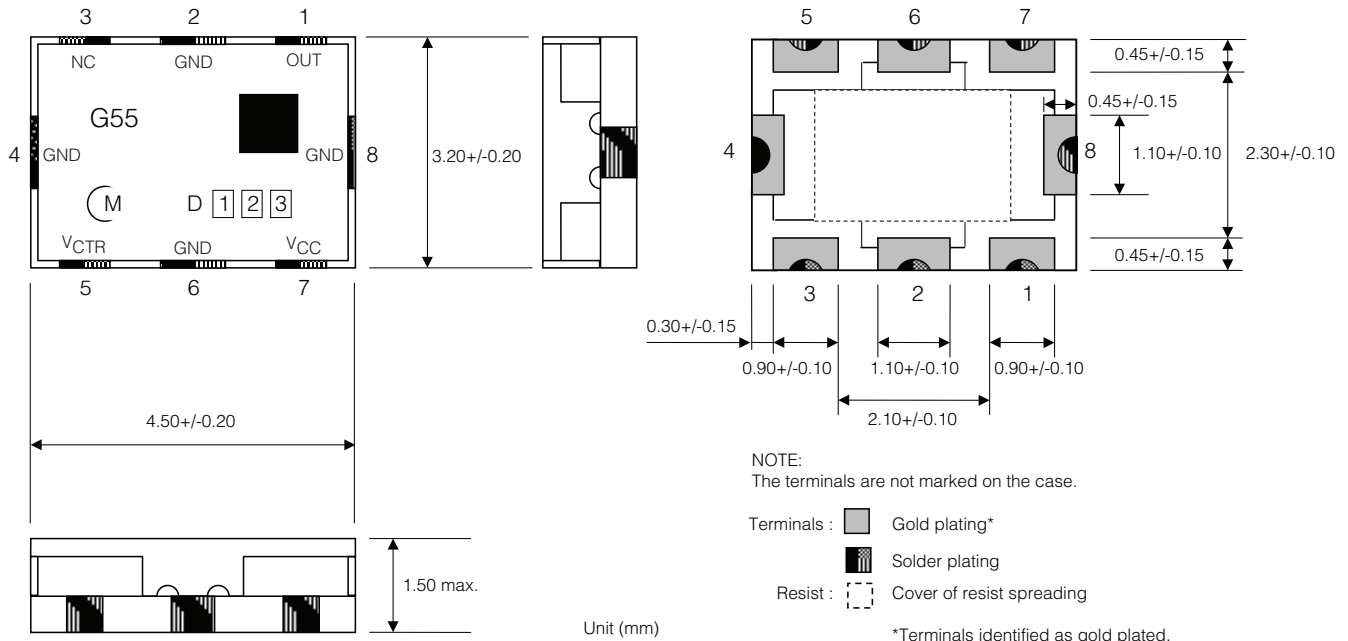

Package the devices for transportation to avoid mechanical vibration or shock.

4.4 ESD Warning

Avoid poor ground connections and electrostatic discharge or induction in production.

5. Package & Ordering Information

5.1 Package Dimensions

NOTE:
The terminals are not marked on the case.

- Terminals : Gold plating*
- Solder plating
- Resist : Cover of resist spreading

*Terminals identified as gold plated, may be wetted with solder. This is only cosmetic, and will not affect the solderability of the terminals.

5.2 Packaging Data

Parameter	Value
Package Type	8L Proprietary Surface Mount
Package Drawing Reference	40567 rev.0
Pb-free and RoHS Compliant	Yes

5.3 Tape and Reel Specification

Figure 5-1: Tape Specification

The dimensions of A (trailer of tape) include the one inserted in the reel core.

Table 5-1: Tape Dimensions

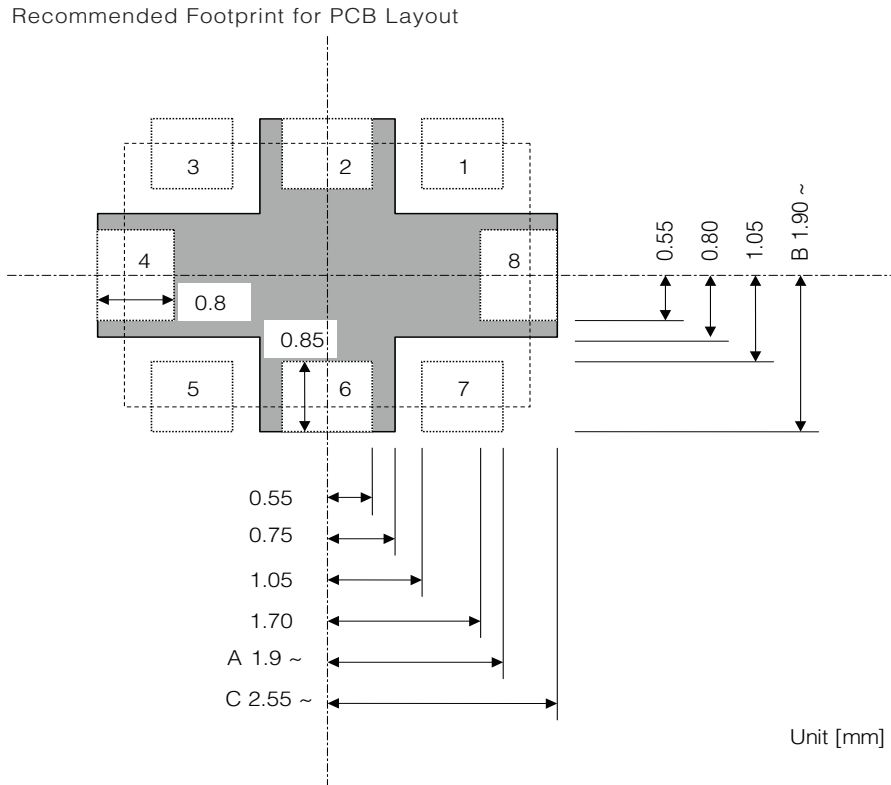

Trailer	A	Empty cavities	$\geq 40\text{mm}$
Leader	B	Empty cavities, Cover tape leader	$\geq 400\text{mm}$
Packaging Units	3000pcs		
Partial absence in carrier tape	More than two successive empty cavities will not occur.		
Minimum order quantity	3000pcs / Reel		

Reel Internal : W1 13.5 +/- 0.5
 Reel External : W2 17.5 +/- 1.0
 Unit : mm

5.4 PCB Footprint

NOTE:
 Please make the GND pattern under the VCO and coat the painted part with solder resist.
 Please decide the dimensions of A, B and C as per the mounting accuracy of the chip mounter.
